

*It's a Thesis (again)!*

Topics

# Temporal Processing (1)

- Identification and Normalisation of Temporal Expressions
  - Do Neural Networks beat existing systems?
  - Is TimeML semantics good enough to represent time and temporal meaning?
- Temporal Relation (Extraction) Classification:
  - Multilinguality: a *general* multi-lingual systems for timeline? How to deal with languages w/o training data (Dutch)
  - How to identify *temporal containers*? What is their impact for timeline extraction?

# Storylines (2)

- Prototypical sequences of events
  - how are events (e.g. earthquakes) narrated?
- Temporal (and logical) event prediction
  - what comes next?
  - what is the storyline of a specific event (e.g. Indonesia earthquake on 12th July 2013)?
