If further proof were needed that sunbathing is now strictly for the C1s and lower. In Vogue, the girls who are modelling the late summer clothes have skin the colour of downmarket. So downmarket has tanning become that admitting to doing it, even when incongruous. And if active tanning doesn't mark you out as downmarket, then it certainly labels anyone who is old enough to remember Farrah Fawcett Majors, as she was then known. The greater the contrast between your tanned and untanned skin, the more you were I only finally realised just how old-fashioned it was to compliment someone on the She looked awkward, shifty, unable quite to meet my gaze.

## 667 search results for |CD|gold

The search finds tokens in all accepted documents of the PMB with the help of the several filters. Filtering is done based on the predefined list of values. An exception is a search according to a token/lemma, where a search term is identical (case-insensitive) to the token or the lemma of a word token. If you want to filter by semantic class, try the semantic lexicon. To search for multi-word expressions, such as New York, which are seen as a single token, use the tilde, e.g. 'New-York'.

By pressing the 'Edit'-button on the right, you can edit semantic tags of the found tokens.

# Phrase Search

## Phrase search

Query:

All queries are interpreted as phrase queries, with tokens separated by whitespace. For each token, the default is to match lemma OR token, other constraints can be specified using the equals sign, multiple constraints for the same token can be combined using pipe symbols. POS tags allow `*` as a wildcard.

For example, use `pos=MD not` to search for a modal followed by *not*, `can|pos=NN` for *can* tagged as a singular common noun, `pos=VB*` *without* for finding any verb form followed by *without*, and so on.

# Idea of PMBots

- PMBots (prudent monitoring bots) are bots that monitor the annotated documents and with high reliability identify (plausible) annotation errors.
- PMBots use context sensitive rules:  
[sem=QUC; cat=N/N] [ ]<sub>x</sub> [tok=of] [cat=N]  
====> [ sem=UOM,CON ]<sub>x</sub>
- PMBots can be prudent (verify) or confident (rewrite)
