

Mutual intelligibility between closely related languages

Charlotte Gooskens

Renée van Bezooijen

Charles University in Prague, 7 October 2009

Overview

15-10-2009 | 2

- › background
- › intelligibility testing
- › factors determining intelligibility
- › four investigations
- › future research

rijksuniversiteit
groningen

Background

Background

15-10-2009 | 4

- › ***Linguistic determinants of mutual intelligibility in Scandinavia***
- › Financed by NWO (The Netherlands Organisation for Scientific Research)
- › 1 January 2006 – 1 January 2011
- › Members of the project group:
 - Nanna Haug Hilton
 - Anja Schüppert
 - Renée van Bezooijen
 - Charlotte Gooskens
 - student assistants
 - Sebastian Kürschner
 - Vincent van Heuven
- › <http://www.let.rug.nl/~gooskens/project/>

rijksuniversiteit
 groningen

Background

15-10-2009 | 5

Semiconmunication

- › Haugen (1966)
- › \approx nonconvergent/asymmetric/bilingual discourse, receptive bilingualism
- › Speakers of different but related languages each speak their own language and still comprehend each others' languages
- › Mutual intelligibility is sometimes imperfect and asymmetric

rijksuniversiteit
groningen

Background

15-10-2009 | 6

Observed semicommunication

- › Danish - Norwegian - Swedish (Haugen 1966, Maurud 1976....)
- › Czech - Slovakian (Budovičá 1987)
- › Czech - Polish (Hansen 1987)
- › Spanish - Portuguese (Coseriu 1988, Jensen 1989, Zeevaert 2002)
- › Italian - Spanish (Hansen 1987)
- › German - Dutch (Haz 2002)
- › Frisian - Dutch (Feitsma 1986)
- › Croatian - Serbian (Haugen 1990)
- › Hindi - Urdu (Haugen 1990)
- › Icelandic - Faeroese (Braunmuller & Zeevaert 2001)
- › Macedonian - Bulgarian (Haugen 1990)
- › Russian - Bulgarian (Braunmuller & Zeevaert 2001)

rijksuniversiteit
 groningen

Central questions

- › How can the mutual intelligibility between closely related languages be measured?
- › How can the relevant (extra-)linguistic factors be measured?
- › To what extent are the (extra-)linguistic factors predictors of intelligibility?

Intelligibility

Measuring intelligibility

15-10-2009 | 9

- › **Opinion testing:**

How well does the listener **think** he understands the other language variety?

- › **Functional testing:**

How well does the listener **actually** understand the other language variety?

- › **Observations:**

How well do people understand each other in **real** language situations?

Measuring intelligibility

15-10-2009 | 10

Type of research	Type of speech	Method
opinion test	<ul style="list-style-type: none">• spontaneous speech• read texts• isolated words• ...	<ul style="list-style-type: none">• open questions• multiple choice• translations• reaction times• ...
functional test	<ul style="list-style-type: none">• spontaneous speech• read texts• isolated words• ...	<ul style="list-style-type: none">• opinion scales
observations	<ul style="list-style-type: none">• spontaneous speech	<ul style="list-style-type: none">• counting phenomena

Factors explaining intelligibility

Factors explaining intelligibility

15-10-2009 | 12

- › Non-linguistic
- › Linguistic (distances)

rijksuniversiteit
groningen

Factors explaining intelligibility

15-10-2009 | 13

Non-linguistic

- › attitude
- › contact
- › orthography

rijksuniversiteit
 groningen

Explaining factor: attitude

15-10-2009 | 14

What do you think of the Danish language?

beautiful ☐ ☐ ☐ ☐ ☐ ugly

What do you think of the Danes?

kind ☐ ☐ ☐ ☐ ☐ unkind

Would you like to live in Denmark?

yes ☐ maybe ☐ no ☐

Explaining factor: attitude

15-10-2009 | 15

- › It is plausible that in real life attitudes play a role in intelligibility
- › Still statistic relationships have hardly been found
- › The test situation is likely to block attitudes

rijksuniversiteit
 groningen

Explaining factor: contact

15-10-2009 | 16

I watch Danish television...

once a week ☐

once a month ☐

once a year ☐

less often ☐

I meet Danes...

I am in Denmark...

Explaining factor: contact

15-10-2009 | 17

- › It is certain that contact plays a role in intelligibility
- › Still statistic relationships have hardly been found
- › Scandinavians have little contact

rijksuniversiteit
groningen

Explaining factor: orthography

15-10-2009 | 18

Danish

hund [hun]

Swedish

hund [hund] ‘dog’

rijksuniversiteit
groningen

Factors explaining intelligibility

15-10-2009 | 19

Linguistic distances

- › **pronunciation**
- › **lexicon**
- › morphology
- › syntax

rijksuniversiteit
groningen

Explaining factor: phonetic distance

15-10-2009 | 20

Levenshtein algorithm

- › Heeringa (2004)
- › Measures the phonetic distance between related language varieties
- › Compares the sounds of cognate word pairs
- › Counts how many sounds minimally must be substituted, added or removed in order to change the sounds of one word into the sounds of another word
- › Total distance is obtained by summing word distances

Explaining factor: phonetic distance

15-10-2009 | 21

Example Levenshtein distance:

Danish *ligne* vs. Swedish *likna* 'be like':

l	i:		n	ə
l	i:	k	n	ɑ
<hr/>				
		1		1

$(1+1)/5 = 40\%$ difference

Explaining factor: lexical distance

15-10-2009 | 22

Percentage of non-cognates

Example of a non-cognate:

- › Danish *pige* vs. Swedish *flicka* ‘girl’

Investigations

Investigations

15-10-2009 | 24

- › Text comprehension with open questions
- › Intelligibility of isolated words
- › Intelligibility among children
- › The role of syntax in intelligibility

rijksuniversiteit
groningen

Text comprehension with open questions

Text comprehension with open questions

15-10-2009 | 26

- › The project *Internordisk sprogforståelse*, INS (*Inter-Nordic comprehension*)
- › Supported by the Nordic Cultural Fund
- › Test groups from all Nordic countries
- › Intelligibility of the three mainland Scandinavian languages (Danish, Norwegian and Swedish) is tested
- › Questionnaire about attitudes and contact

Text comprehension with open questions

15-10-2009 | 27

Our contribution to INS:

- › To investigate to what extent differences in inter-Scandinavian intelligibility can be explained by linguistic distances
- › To compare results to intelligibility between speakers of Dutch, Frisian and Afrikaans

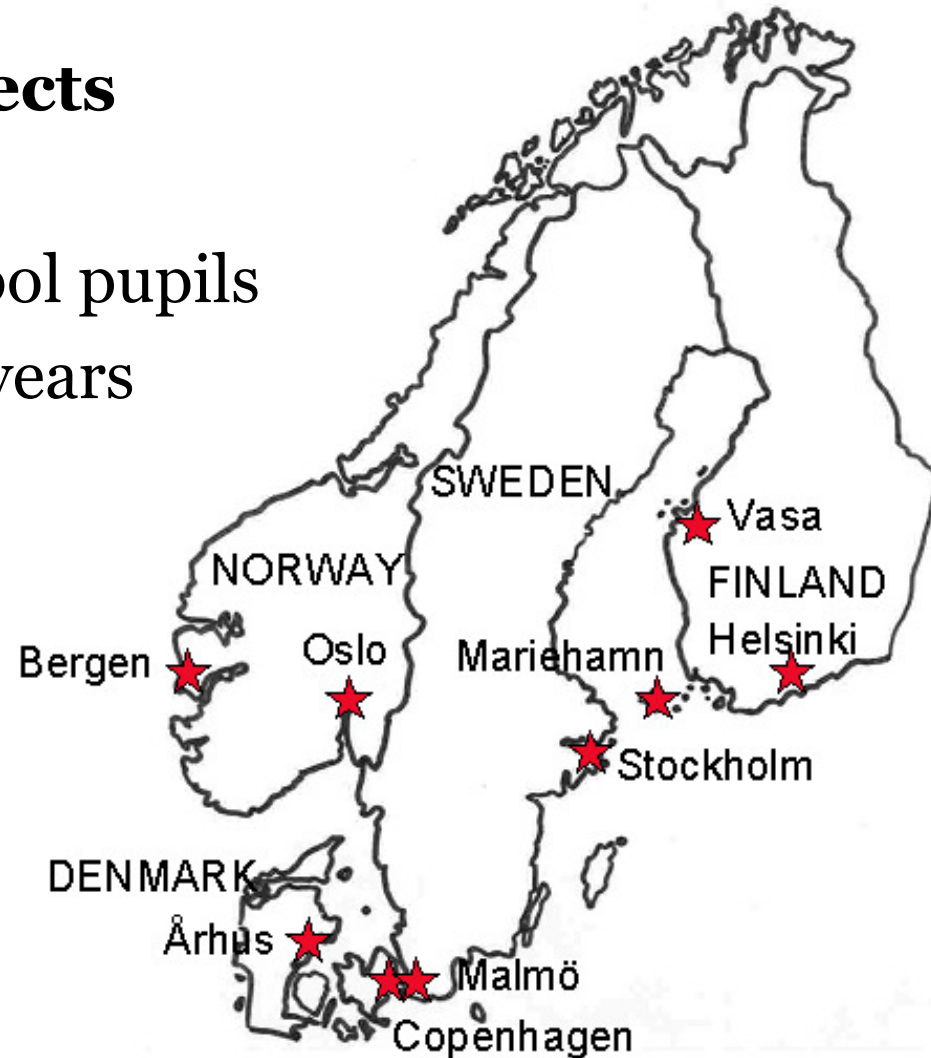

rijksuniversiteit
 groningen

Text comprehension with open questions

15-10-2009 | 28

Scandinavian subjects

- › 690 secondary school pupils
- › between 16 and 19 years

rijksuniversiteit
groningen

Text comprehension with open questions

15-10-2009 | 29

Design of Scandinavian study

Subjects from	Test language		
	Danish	Norwegian	Swedish
Denmark:			
Århus	-	33	59
Copenhagen	-	62	44
Norway:			
Bergen	47	-	40
Oslo	57	-	84
Sweden:			
Malmö	44	43	-
Stockholm	41	47	-
Finland:			
Mariehamn	22	25	-
Vasa	-	12	-
Helsinki	9	21	-

Text comprehension with open questions

West-Germanic subjects

- › 81 secondary school pupils
- › between 16 and 17 years

Text comprehension with open questions

15-10-2009 | 31

Design of West-Germanic study

Subjects:	Test language		
	Dutch	Frisian	Afrikaans
Dutch	-	16	16
Frisian	-	-	17
Afrikaans	15	17	-

Text comprehension with open questions

15-10-2009 | 32

Method

- › News item (250 words)
- › Read aloud in test language
- › 5 open questions
- › Intelligibility was expressed as percentage of correctly answered questions per test group

Text comprehension with open questions

15-10-2009 | 33

Linguistic distances

- › Extra recordings from each of the nine towns in Scandinavia
- › All Scandinavian and West-Germanic recordings were transcribed phonetically
- › Phonetic and lexical distances were calculated

rijksuniversiteit
 groningen

Text comprehension with open questions

15-10-2009 | 34

Correlation between intelligibility and lexical distances

$$r = -.36$$

groningen

Text comprehension with open questions

15-10-2009 | 35

Correlation between intelligibility and phonetic distances

groningen

Text comprehension with open questions

15-10-2009 | 36

Large advantage:

- › Realistic (ecologically valid)

Disadvantages:

- › Difficult to assess representativity of stimulus text
- › Single unintelligible words may have a large effect on intelligibility
- › Difficult to construct open questions
- › Difficult to decide when a question is correctly answered
- › Many varieties needed in order to be able to correlate intelligibility with linguistic distances
- › Provides only an overall impression of the role of phonetic and lexical distances for the intelligibility

Intelligibility of isolated words

Intelligibility of isolated words

15-10-2009 | 38

- › Internet experiment involving seven languages in the Germanic language area
- › Word comprehension

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 39

Research questions

- › How well do speakers of various Germanic languages understand each other's vocabularies?
- › Which linguistic factors play a role in the intelligibility?

rijksuniversiteit
 groningen

Intelligibility of isolated words

15-10-2009 | 40

Test words

- › 384 nouns
- › Randomly selected from a list of 2575 highly frequent spoken words
- › Translated into seven languages
- › Recordings of standard language speakers

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 41

Test words are non-cognates or cognates

Example non-cognate:

Du. *lichaam*, De. *krop*, ‘body’

Fr. *fyts*, Zw. *cykel*, De. *Fahrrad* ‘bicycle’

Examples cognates:

Fr. *strategy*, Du. *strategie*, De. *strategi* ‘strategy’

Ge. *Weg*, Sw. *väg*, Fr. *wei* ‘road’

Intelligibility of isolated words

15-10-2009 | 42

Recordings

- › Swedish (Sw)
- › Norwegian (No)
- › Danish (Da)
- › German (Ge)
- › Low German (LG)
- › Frisian (Fr)
- › Dutch (Du)

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 43

Listeners	Test language						
	Da	Sw	No	LG	Ge	Fr	Du
Sw	X		X				
No	X	X					
Da		X	X	X	X	X	X
Fr	X						
Du	X			X	X		

Intelligibility of isolated words

15-10-2009 | 44

Listeners	Test language						
	Da	Sw	No	LG	Ge	Fr	Du
Sw	X		X				
No	X	X					
Da		X	X	X	X	X	X
Fr	X						
Du	X			X	X		

Intelligibility of isolated words

15-10-2009 | 45

Listeners	Test language						
	Da	Sw	No	LG	Ge	Fr	Du
Sw	X		X				
No	X	X					
Da		X	X	X	X	X	X
Fr	X						
Du	X			X	X		

Intelligibility of isolated words

15-10-2009 | 46

Listeners	Test language						
	Da	Sw	No	LG	Ge	Fr	Du
Sw	X		X				
No	X	X					
Da		X	X	X	X	X	X
Fr	X						
Du	X			X	X		

Intelligibility of isolated words

15-10-2009 | 47

Dutch	<u><i>Ik weet dat hij naar huis komt</i></u>
Frisian	<u><i>Ik wit dat er thús komt</i></u>
German	<u><i>Ich weiß dass er nach Hause kommt</i></u>
Danish	<u><i>Jeg ved at han kommer hjem</i></u>
Swedish	<u><i>Jag vet att han kommer hem</i></u>
Norwegian	<u><i>Jeg veit at han kommer hjem</i></u>

‘I know that he comes home’

Intelligibility of isolated words

15-10-2009 | 48

Listeners

- 1400 high school pupils
- 15-19 years
- Speaking test language at home

rijksuniversiteit
groningen

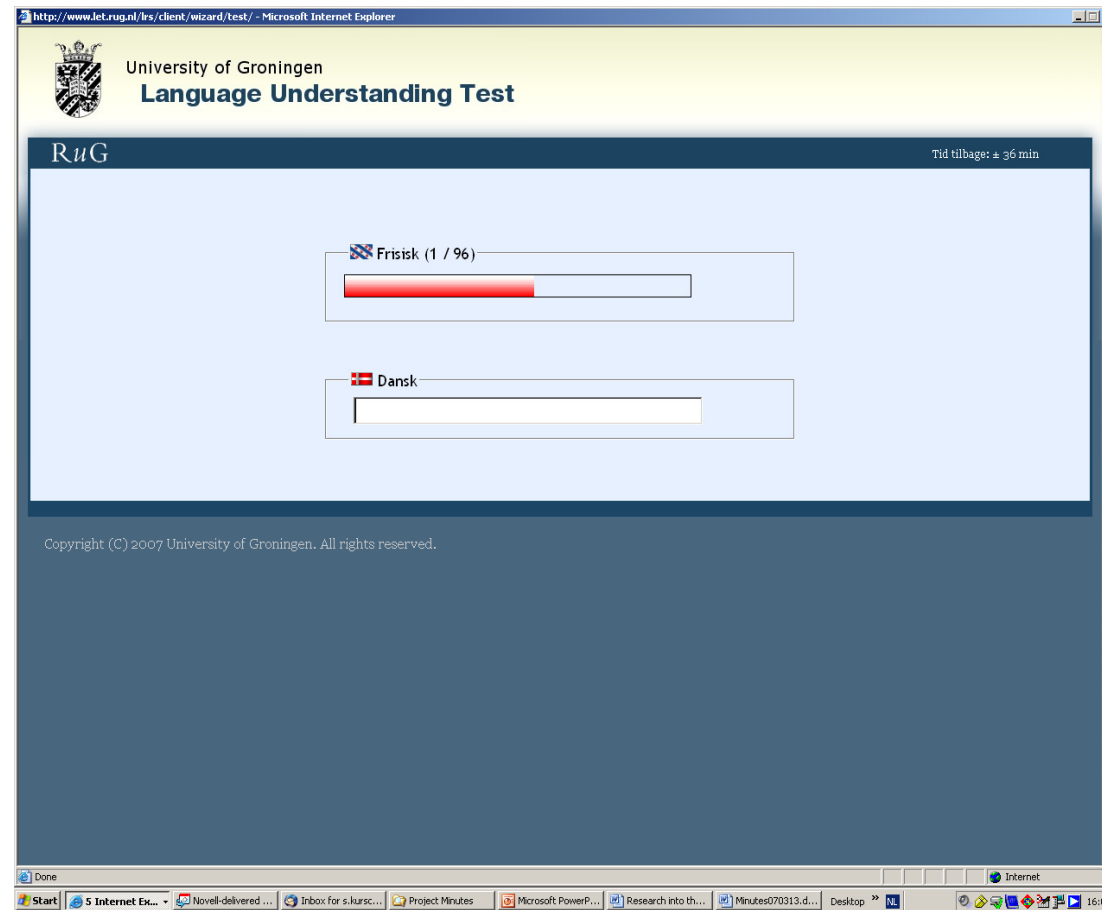

Procedure

- › Internet-based
- › Subjects listened to 96 words via head phones
- › Translations into mother tongue
- › <http://www.let.rug.nl/lrs>
login: germanic
password: guest

Internet-experiment

15-10-2009 | 50

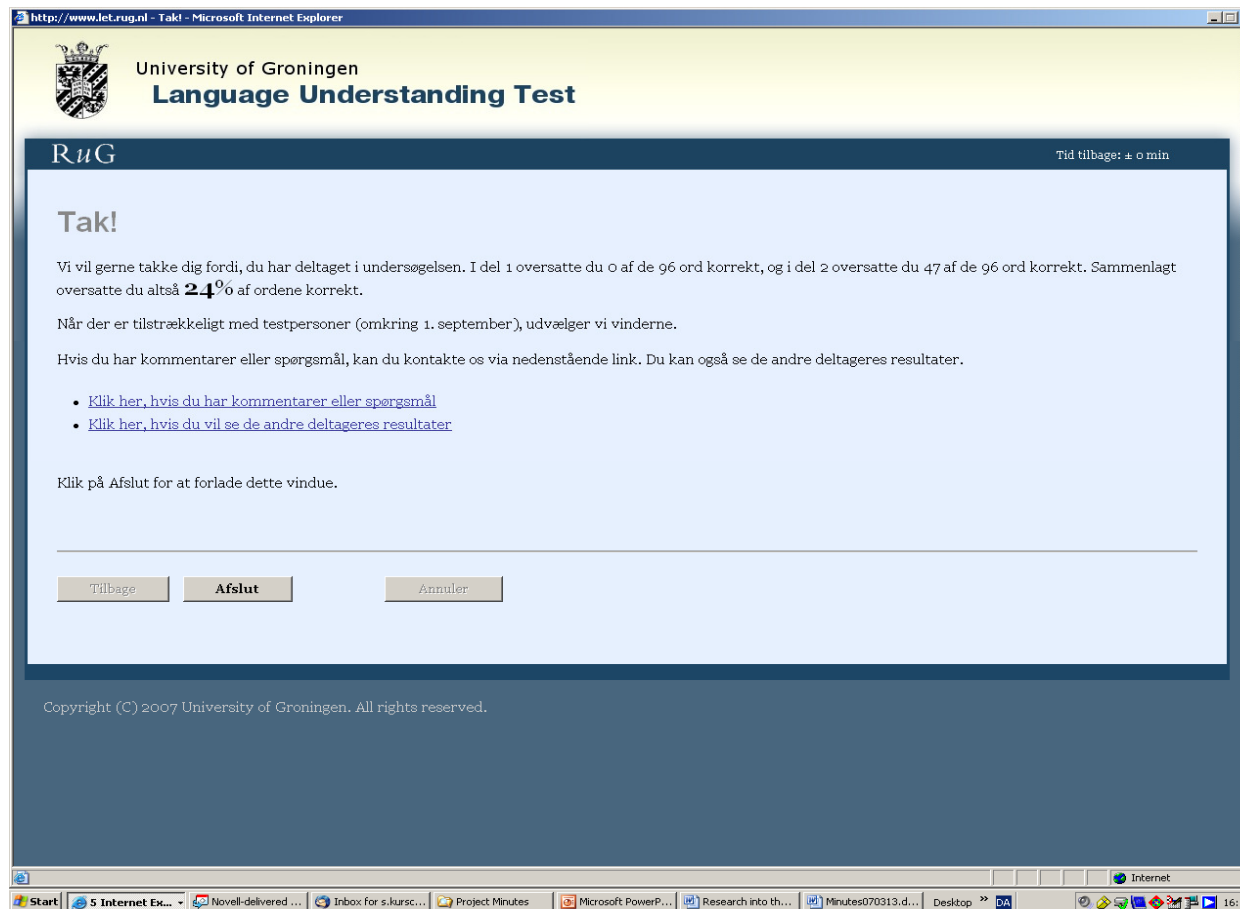

rijksuniversiteit
groningen

Internet-experiment

15-10-2009 | 51

The result of the test person is shown:

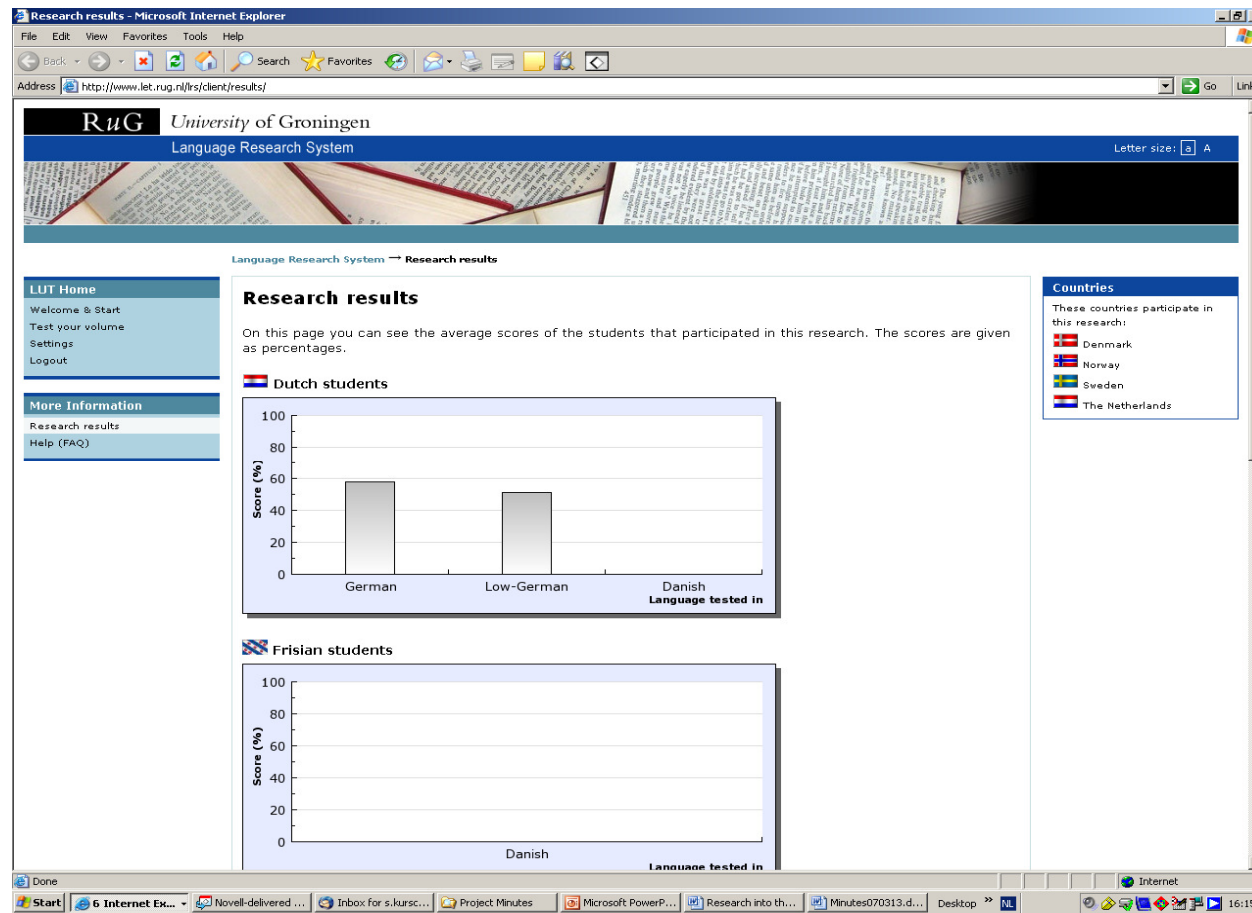

rijksuniversiteit
 groningen

Internet-experiment

15-10-2009 | 52

The results of all test persons are shown:

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 53

Calculations

Intelligibility = percentage of correctly translated words

- › Ignoring spelling mistakes
ex. Dutch *kultuur* instead of *cultuur* for Danish *kultur* ‘culture’
- › Allowing alternative translations
ex. Dutch *winkel* or *boetiek* for Low German *Laden* ‘shop’

Intelligibility of isolated words

15-10-2009 | 54

% cognates per language pair

Intelligibility of isolated words

15-10-2009 | 55

% correctly translated cognates:

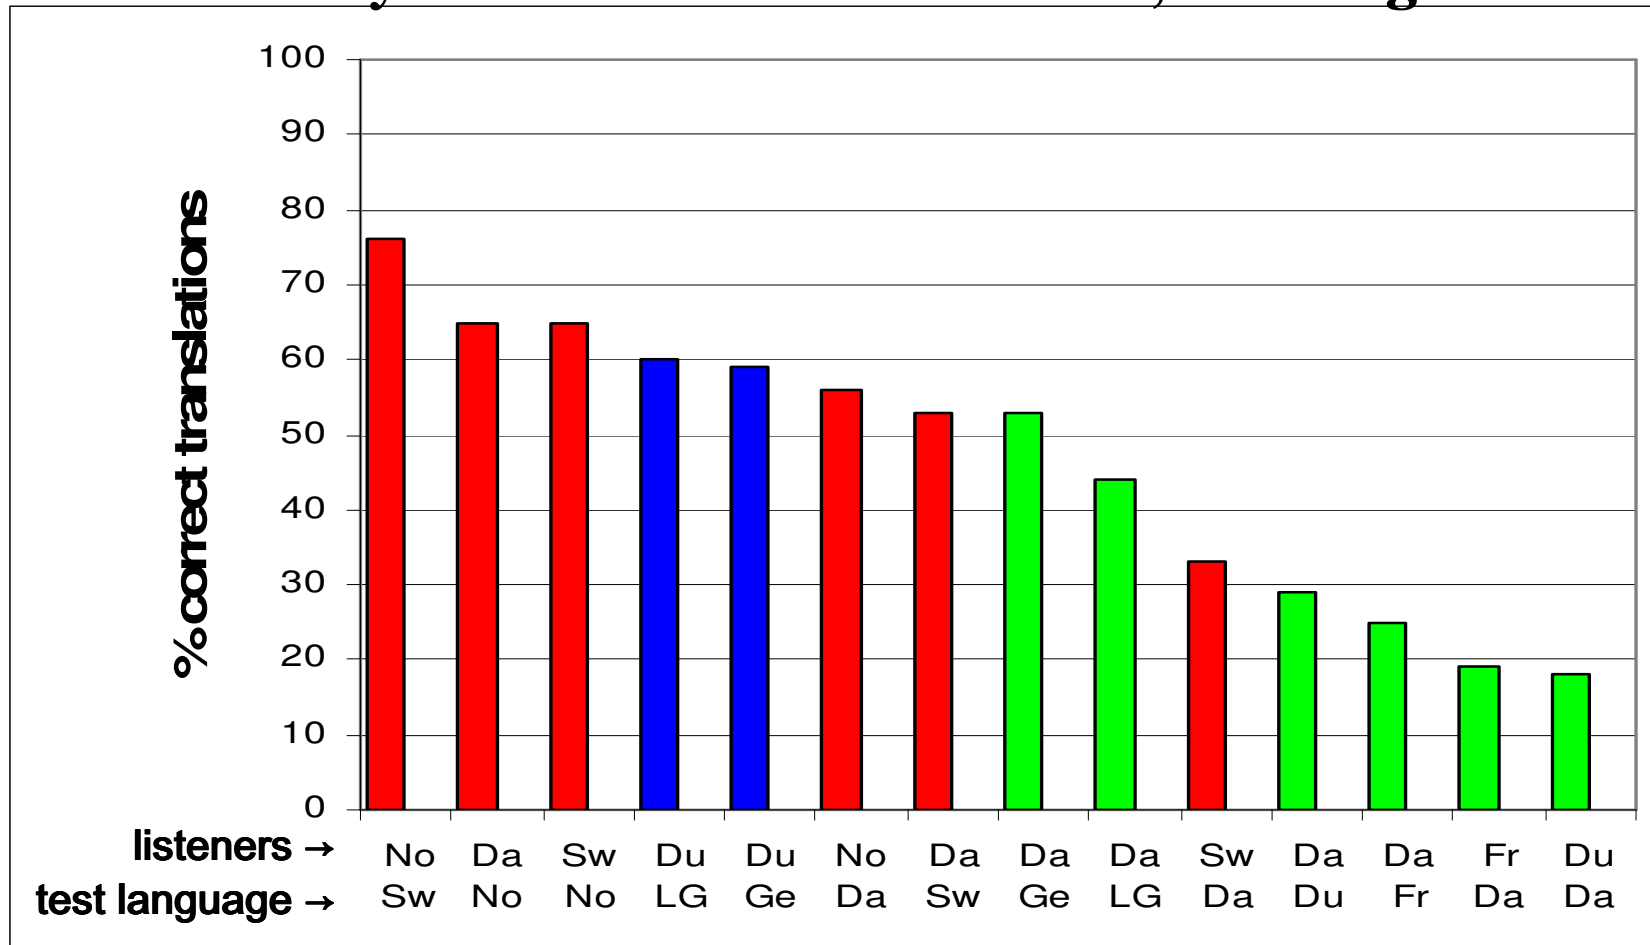

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 56

% correctly translated inherited words, from high to low

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 57

% correctly translated loan words, from high to low

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 58

From small to large difference between inherited and loan words

rijksuniversiteit
groningen

Intelligibility of isolated words

15-10-2009 | 59

11 factors considered for prediction of intelligibility of Swedish words by Danish listeners

- **Levenshtein distance**
- **Foreign sounds**
- **Word length**
- Word stress differences
- **Differences in number of syllables**
- Lexical tones
- **Stød**
- **Neighbourhood density**
- Etymology (native words versus loan words)
- **Orthography**
- **Word frequency**

Intelligibility of isolated words

15-10-2009 | 60

Analysis of errors can give information about listener strategies

- › Phonetic confusions of sounds
e.g. Sw. /k/ is often perceived as /g/ by Danes
Sw. *klass*, Da. *klasse* ‘class’ is translated into Da. *glas* ‘glass’
- › Influence of neighbour words
e.g. Sw. *kør*, Da. *kor* ‘choir’ is often translated into Da. *kør* ‘drive’
- › Interference from foreign languages
e.g. Sw. *hot*, Da. *trussel* ‘threat’ is often translated into Da. *varm* ‘hot’

Intelligibility among children

Intelligibility among children

15-10-2009 | 62

Ph.D.-project Anja Schüppert:

Nonlinguistic factors can be neutralised by testing young children:

- Cannot read
- Have no knowledge of foreign languages
- Have had little contact with neighbouring countries
- Have less strong attitudes towards neighbouring languages

Intelligibility among children

15-10-2009 | 63

Subjects

- 19 Danish children from Odense, 4-6 years old
- 26 Swedish children from Vaxjö, 4-6 years old
- 20 Danish adults from Odense
- 19 Swedish adults from Vaxjö

rijksuniversiteit
groningen

Intelligibility among children

15-10-2009 | 64

Stimulus material

- 50 nouns (cognates) that are frequent in child language and early acquired
- Read aloud in Danish and Swedish

rijksuniversiteit
 groningen

Intelligibility among children

15-10-2009 | 65

Test

- Danes listen to Swedish words and Swedes listen to Danish words
- Per word four pictures are presented
- Subject points to the picture corresponding to the test word on a touch screen
- Response time is measured

Intelligibility among children

15-10-2009 | 66

Example

Swedish subject hears Danish *æble* ‘apple’ and sees the following pictures

The subject chooses rightmost picture

rijksuniversiteit
groningen

Intelligibility among children

15-10-2009 | 67

Intelligibility results

rijksuniversiteit
groningen

Attitude elicitation

- › Children and adults were asked if they thought the language sounded...
- › ...less nice than their native language (-1)
- › ...as nice as their native language (0)
- › ...nicer than their native language (1)

Intelligibility among children

15-10-2009 | 69

Attitude results

Intelligibility among children

15-10-2009 | 70

Plans

Measure intelligibility and attitudes among children of various ages

rijksuniversiteit
groningen

The role of syntax in intelligibility

The role of syntax in intelligibility

15-10-2009 | 72

Research questions

- › Do syntactic differences play a role in the intelligibility of a closely related language?
- › What is the relative influence of syntactic versus phonetic differences on intelligibility?

rijksuniversiteit
groningen

The role of syntax in intelligibility

15-10-2009 | 73

Research design

- › Investigation tests the effect of idiosyncratic Norwegian syntactic constructions on Danes' comprehension of Norwegian.
- › e.g. difference in particle placement

Norwegian:	Han	tok	av	brillene
	<i>subj</i>	<i>verb</i>	<i>part</i>	<i>obj</i>

Danish:	Han	tog	brillerne	af
	<i>subj</i>	<i>verb</i>	<i>obj</i>	<i>part</i>
	'he took off the glasses'			

The role of syntax in intelligibility

15-10-2009 | 74

Research design

- › Listeners are asked to decide whether the content of a sentence is plausible or not (binary choice)

e.g. implausible: *elefanten slog ordet op*
‘the elephant looked up the word’

e.g. plausible: *journalisten skrev en artikel ud*
‘the journalist printed the article’

- › Response time is measured in addition to number of correct answers

The role of syntax in intelligibility

15-10-2009 | 75

One informant hears:

	Without Noise		With Noise	
	Danish syntax	Norwegian syntax	Danish syntax	Norwegian syntax
Danish phonology	12	12	12	12
Norwegian phonology	12	12	12	12

The role of syntax in intelligibility

15-10-2009 | 76

Research design

- › 6 types of syntactic constructions
- › 8 sentences per construction
- › 2 plausability conditions
- › 4 different linguistic conditions
- › 2 noise conditions

768 total sentence count

rijksuniversiteit
 groningen

The role of syntax in intelligibility

15-10-2009 | 77

Plans

- › Experiment still in design stage, but will be completed and conducted during the coming year with informants in Denmark
- › If results show that syntactic differences do indeed impede intelligibility the project can be extended to listener groups in Norway and Sweden.

Future research

Future research

15-10-2009 | 79

- › Develop a general model of intelligibility among closely related languages

rijksuniversiteit
groningen
