

Natural Language Inference for Dutch

Natural language inference (NLI):

- Identify semantic relations (entails, contradicts, is neutral)

A group of scouts are hiking through the grass
Some people are walking

A hiker is on top of the mountain and is dancing
There is no hiker dancing on top of the mountain

The black woman is wearing glasses over the headdress
A woman is wearing an Egyptian headdress

- Central manifestation of semantic competence
- Popular NLP task (FraCas, RTE-N, SICK, SNLI, ...)
- Under-researched for Dutch

To do (1): create NLI dataset in Dutch

How?

Which?

Why?

Time & efforts?

By translating an existing one

SICK (Sentences Involving Compositional Knowledge)

Offers a good starting point

Not much, 10K sen (6K diff) (e.g., SICK-BR)

A group of scouts are camping in the grass.
A group of scouts are hiking through the grass.
Some people are walking
People are walking
Some people are walking
A group of scouts are camping in the grass
A group of scouts are hiking through the grass
Some people are walking

Een groep verkenners kampeert in het gras.
Een groep verkenners wandelt door het gras.
Sommige mensen lopen
Mensen lopen
Sommige mensen lopen
Een groep verkenners kampeert in het gras
Een groep verkenners wandelt door het gras
Sommige mensen lopen

To do (2): work with the data

Several possibilities:

- Create strong baselines
- Reproduce results of related work (SemEval-2014: task 1)
- Design your own reasoning monster

Why should I do it?

- You contribute to Dutch language technology
- You work with a generic task which has many applications
- You create a dataset that other will use

Why should I do it?

- You contribute to Dutch language technology
- You work with a generic task which has many applications
- You create a dataset that other will use
- You will become famous

Why should I do it?

- You contribute to Dutch language technology
- You work with a generic task which has many applications
- You create a dataset that other will use
- You will become famous (maybe)
