

'Graphical Excellence' of Visual Representations of Data

Research Seminar Friday, November 22, 2019

Dept. of Information Science / Leonie Bosveld-de Smet

Tufte about 'graphical excellence'

- "Graphical excellence is that which gives to the viewer the **greatest number of ideas** in the **shortest time** with the **least ink** in the **smallest space**."
- Edward R. Tufte, *The Visual Display of Quantitative Information*.

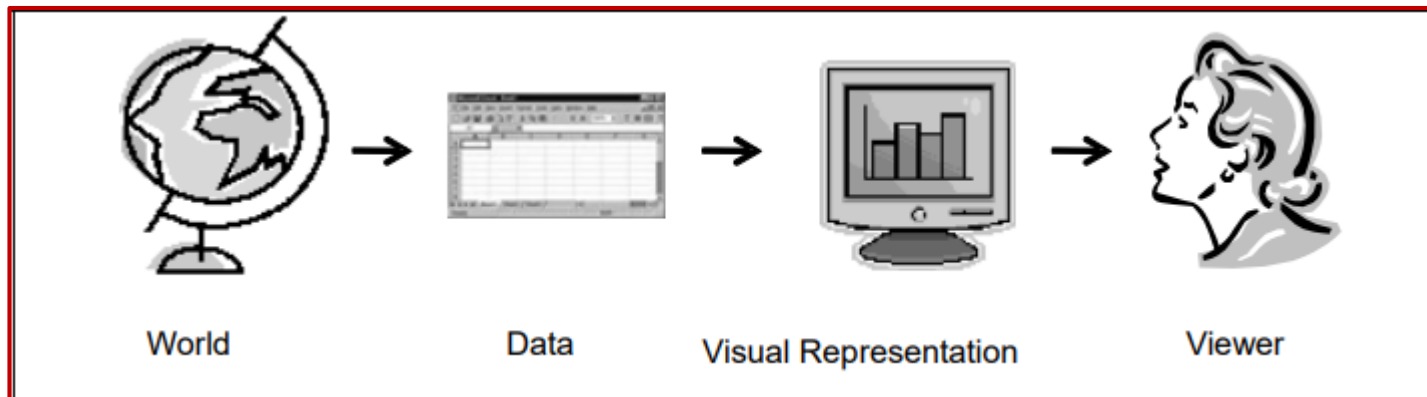

Visual Communication

- Communication about (some part of) the world involving **external visual representations**

the three parts of visual
communication

Computer-supported visualization of data

Cities connected by roads

World

Data Base

```
a,b,...o :city  
1,2,...21:road  
connect(a,1,b)  
connect(a,2,d)  
connect(a,3,l)  
.  
.  
.
```

Viewer

Data exploration tasks

- Which visual representations are **well-suited** for representing which data?
- Which visual representations are '**usable**' (effective, efficient, preferred, ...)?
 - some types of visual representations are **well-received** (map-based representations)
 - some yield **mixed results**
 - Still others work **well in some tasks**, but **poorly in others**

Knowledge sharing between employees
