

# GroRef: Rule-Based Coreference Resolution for Dutch

Rob van der Goot, Hessel Haagsma, Dieke Oele

Rijksuniversiteit Groningen

# Introduction

Stanford's Multi-Pass Sieve Coreference Resolution System (Lee et al. [2011], Lee et al. [2013])

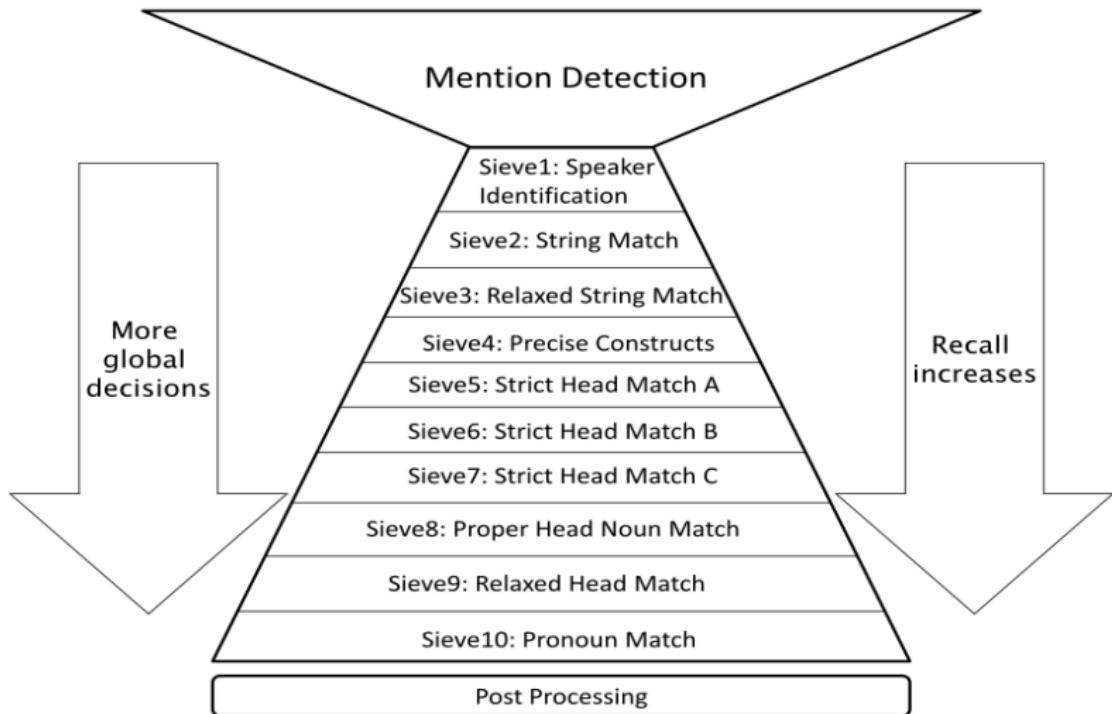

- Sieve-based architecture.
- Deterministic coreference models, stacked on top of each other.
- Each model builds on the previous model's clustering output.

# Mention Detection

Alpino [Van Noord, 2006]

- Noun Phrases
- Names
- Subjects
- Pronouns

# Sieves

Taken from Lee et al. [2013]

# Results (Blanc)

Corpus	Mention detection			Coreference		
	R	P	F1	R	P	F1
Apple (dev)	65	57	61	37	28	31
Boeing	60	58	60	32	31	31
GM	64	58	61	35	29	32
Stock	62	48	53	35	20	26

# Mention Detection Errors

- Errors in approach:  
[Hooggeplaatst manager bij [Apple]] ...
- Annotation inconsistencies  
... de fabrikant van de iPhone ([die] op woensdag voor het eerst ...  
[de [iTunes Apps Store]] vs. [de iPhone]
- Mistakes of Alpino

## Example Output

Hooggeplaatst manager bij [Apple] verlaat [bedrijf] na antenneproblemen [iPhone 4]

[Mark Papermaster] , [de manager bij [Apple Inc.]] [die] toezicht houdt op [hardware engineering van [de iPhone]] , is weg bij [het bedrijf] . Dit volgde op de kritiek [die Apple] vorige maand kreeg vanwege de positie van de antenne op het meest recente model van de [iPhone] , [de [iPhone 4]] . [Apple] bevestigde dat [Papermaster] ( 49 ) [het bedrijf] had verlaten maar wilde niet zeggen of [hij] uit eigen beweging wegging of was ontslagen . [Papermaster] wilde geen commentaar geven op de situatie .

# Conclusion

- Stanford's coreference resolution system can easily be adapted to other languages
- This system is robust across different domains
- Unsupervised: no training data needed
